PMV-4 Mishap Claims One Soldier's Life

A 19-year-old Private assigned to 1st Cavalry Division, Fort Hood, Texas, died in a PMV-4 mishap 4 July 2018 in Gardner, Kansas, at 0130 local. The Soldier was on leave when his vehicle left the roadway in dry weather conditions and crashed. Authorities suspect speed was a factor in the crash.

ENGAGEMENT TIPS:

- According to the National Highway Traffic Safety Administration, there were 37,461 traffic fatalities in 2016. Among them, 10,111 (27 percent) were in crashes where at least one driver was speeding.
- In fatal crashes, 50 percent of speeding passenger vehicle drivers were unrestrained at the time of the crash, compared to 21 percent of non-speeding passenger vehicle drivers.
- Young male drivers were the most likely to be speeding at the time of the fatal crash. Nearly one-third (32 percent) of male drivers in the 15- to 20-year-old age group involved in fatal crashes were speeding at the time of the crash, compared to 22 percent for female drivers in the same age group.
- Drivers who were speeding when involved in fatal crashes were more likely to have been drinking - and drinking more - than those drivers who were not speeding.

PLRs provide leaders with awareness of Army loss and highlight potential trends that affect combat readiness. Our Army depends on you to use these PLRs to help Soldiers understand the impact of decisions made on and off duty.
